

The REAL Alkahest and true Elixir of Life

□ 100%TRUTH on Wed Dec 17, 2008 2:15 pm

For all those people who are tired of reading the bickering and arguing from **armchair** alchemists, and you just want someone to hand you the simple step by step instructions for making stone in one flask, that you never have to open or add anything to, just "solve et coagula", here is my gift:

The Elixir of Life

You can thank me later after you take the first 5 drop dose of the Alkahest and see what it can do.

Combine above with below

The celestial dew with the water of the earth

The moonlight in the dew,

the sunlight in the sea salt

And it's that easy. Ha!

You may be able to use calcium nitrate or calcium chloride to absorb the dew since it can absorb much more water than it's own weight. Even when the top is already covered with a thick layer of water, it just keeps on sucking in more water from the air. As it does this, it also pulls in the astral energy.

Right now I have another flask of water and salt digesting to see if it works. I used a sonic water vaporizer that makes fog. Then I placed the dry calcium nitrate under the fog as it rolled off the other bowl of water. This water absorbed by the calcium nitrate should now have the astral spirit in it, just like morning dew. But we'll have to see if it works or fails.

I assume it will work since a few alchemists, like George Ripley, multiplied their stone by just sitting it in a bowl over another bowl which was being boiled to release steam, and the stone would deliquesce and absorb that **water vapor**. Then the stone could be digested with the water again, then dried, and the process repeated. Morning dew is just nature's way of condensing water in a special way. It would be nice if we could just distill **water vapor** and condense it back to water, and this would be the same thing, but it's not. The way in which the water is condensed is vital, which is why rain water won't even work.

Re: The REAL Alkahest and true Elixir of Life

📄 100%TRUTH on Wed Dec 17, 2008 3:25 pm

There are several examples of the alchemists using sea salt and morning dew to make the Philosophical Mercury, but they don't mention that it is even being created by these 2 ingredients, and they may not have even understood why dew or sea salt was needed in their recipes.

From Sir Kenelm Digby's "Chemical Secrets and Experiments"

RAMSdigital.com library

file name: CHEMSECRETS_original.PDF (DISC 1)

"OPUS MAGNUM EX VIRGINEA TERRA" (virgin earth)

Explains the process of making the stone from clay which is impregnated with sun and moon (or could be gold and silver, or sea salt and dew)) and morning dew collected in may.

from "THE BOOK OF FORMULUS"

RAMS library publication

file name: FORMULUS.PDF (DISC 1)

"THE FAMOUS ELIXIR OF LIFE"

(Prepared from Lemon Balm [Melissa])

Uses sea salt to make a solvent for the herb. The sea salt is melted, then allowed to absorb morning dew during a cold morning.

"The Hermetic Art: The Teaching Concerning Atomic Transmutation"

In the Volpierre work (Nicolas Burtchel) during the distillations, the calx has to absorb moisture from the air and dew is probably the best. Only after absorbing this moisture from the air, then repeated distillations to remove the absorbed water; only then will then Philosophical Mercury appear.

In George Ripley's "Balsom Book" at the end of the work, in order to multiply the stone, it has to absorb moisture from the air several times, and he used a steam bath, but morning dew is probably what was originally used.

In the Paracelsus VITRIOL path, the **green lion** is calcined using a special water which Paracelsus said is rain water, but the "Rosicrucian Secrets" says is Ramon Lull's caclination water which is probably made from morning dew

In Sigismund Bacstroms "Rosicrucian Aphorisms and Process" where he details the step by step instructions of making the glowing stone from blood, he uses 'common mercury' to multiply the stone. And that common mercury is probably the white one which is made from dew and sea salt.

In Armand Barbault's "Gold of a **Thousand Mornings**"

he keeps a sealed flask on low heat that contains nothing but soil which he waters every day with morning dew. After several years he eventually obtains the Philosophical Mercury which dissolves gold and takes it's color, but does not test as having any gold dissolved in it.

And I'm sure there are plenty more examples, but here above we have processes that use clay, copper, blood, antimony, and even an herb to make the Elixir of Life, and the *central secret* appears to be this universal solvent made from dew and/or sea salt. It's like it was right there in front of our eyes this whole time, but it took the Acetum Leyden letter to explain to us exactly how to make it from dew and sea salt, and it proves itself by dissolving metals *and* putrfying them,

yet you can ingest this mercury and it cures all disease already whithout any fermentation with gold.

This is beautiful!
